Summary

Senior Frontend Developer with 6+ years building React/TypeScript products for US healthcare and enterprise clients. Currently leading frontend work for a client team, owning architecture, design systems and coding standards while guiding developers. Brings AI workflows with Claude Code, skills and MCP tooling to help teams ship faster and more reliably.

Experience

OPSXPRESS Jan 2026 – Present

Sr. Frontend Developer | Client: EmmaCare

- Led a team of 10 frontend engineers, defining coding standards and a feature-based folder structure for a 120K+ line React/TypeScript codebase, enforced through ESLint and CI checks; mentored 4 junior engineers.
- Rolled out Claude Code with shared project rules, a `/start-ticket` skill and a custom MCP server that pull Jira details, find affected files and draft an implementation plan, plus AI code review on every PR.
- Built EmmaCare's design system from scratch (React, Storybook, design tokens) with 35+ accessible components, adopted across 3 products used by multiple US healthcare providers and now the default for all new UI work.
- Migrated data fetching from Redux to TanStack Query with standard query-key and hook patterns, removing ∼8K lines of boilerplate and cutting duplicate API calls on the main dashboard roughly in half.
- Owned the release pipeline across dev, sandbox, preprod and production with automated tests, environment configs and approval gates, enabling two-week releases and cutting release prep from a full day to about 4 hours.
- Served as the frontend point of contact for clients, leading requirement calls, sprint demos and estimates, turning feedback into scoped tickets and cutting mid-sprint requirement changes from ∼5 per sprint to 1.

SLK SOFTWARE Mar 2023 – Dec 2025

Senior Software Engineer | Client: Emerson

- Built a config-driven UI engine in React that renders forms and screens from JSON schema, letting the team ship new screens through config instead of code and cutting build effort for each new screen by ∼30%.
- Cut bundle size by 300KB with route-level code splitting and lazy loading, reducing first load from ∼4s to ∼2.5s.
- Architected Redis caching for Node.js APIs serving 2K+ requests/min, cutting latency from 450ms to 160ms.
- Set up unit and integration testing with Jest and React Testing Library, adding 120+ tests across core modules and making them a required CI check on every PR so regressions were caught before reaching QA.
- Led a 5-member team to build SLK's internal Employee Nomination System, owning architecture, code reviews and sprint planning from design to launch, while mentoring 2 junior developers on the team.

GERMANTOWN TECHNOLOGIES Apr 2022 – Feb 2023

Software Engineer

- Built the React UI for a hospital Patient Management System, fully responsive across desktop, tablet and mobile.
- Integrated front-end with REST APIs to manage real-time patient records across 5+ hospital departments.
- Optimized data-heavy patient screens with React.memo, useMemo and useCallback to cut extra re-renders.
- Shipped features via a CI/CD pipeline with automated tests, delivering updates to hospital staff every sprint.

QPI CLOUD (via Hackowls Software) Jun 2020 – Mar 2022

Application Developer

- Improved page performance by managing API polling for live comment updates and minimizing DOM changes.
- Built retry and cancel logic for key API calls in Redux Thunk, keeping workflows stable on network failures.
- Reduced redundant API calls by 30% using debouncing, batching and intelligent request control.

Technical Skills

Languages: JavaScript, TypeScript, HTML, CSS
Frontend: React.js, Next.js, TanStack Query, Redux, Zustand, GraphQL, React Native
UI & Design Systems: Tailwind CSS, Material UI, Storybook, Design Tokens, Accessibility (WCAG)
Backend: Node.js, Express.js, MongoDB, Redis, REST APIs, Socket.io
Testing & Quality: Jest, React Testing Library, ESLint, CI Quality Gates
AI & Developer Tooling: Claude Code, Custom Skills, MCP Servers, AI Code Review
Tools & Concepts: AWS, Docker, CI/CD, Git, Jira, Frontend Architecture, System Design, Web Performance

Certifications

Model Context Protocol: Advanced Topics – Anthropic | **AWS Certified Cloud Practitioner** – AWS
